Enhancing expertise in Information Technology to drive professional growth.

EXPERIENCE

GMA New Media Inc.

Analyst Developer

Quezon City, Philippines

April 2023 - Present

- One of the main developers for a vote aggregator website for the largest TV Network in the Philippines that is designed to track and display data for the 2025 Philippine Midterm Elections.
- Enhanced a microsite module for the network's existing CMS system to manage Senator and Party-list information.
- Revamped a corporate website and content management system for the real estate division of Philippines' largest conglomerate.
- Provided commercial website and CMS maintenance services as well as addition of seasonal pages for the Philippines' biggest shopping mall chain.
- Collaborated on development of a custom content management system and news portal website for the regional arm of Philippines' largest TV network.
- Developed a script to automate the conversion of Drupal schema and data into a simplified MySQL database schema.
- Performed rotating Scrum Master duties during Sprint stand-ups.
- Conducted code reviews with fellow developer colleagues.

Freelance Developer

Paranaque City, Philippines

March 2020 - December 2023

- Provided web development services to various production and startup websites in different freelancing platforms, ranging from bug fixes, debugging tasks to revamp and redesign.
- Programmed a tree planting mobile game using Unity game engine that ensures game data is consistent and UI is engaging among end-users.
- Collaborated with other programmers to refine and analyze each other's code through code reviews.

Circus International Philippines Inc.

Programmer

Makati City, Philippines

October 2018 - December 2019

- Contributed to the development of a point-of-sale (POS) software that generates sales reports, organizes orders, and provides easy access for cashiers and end-users.
- Created a PHP application to transform data of CSV files to a readable format.
- Developed a mobile ordering application using React-native that allows customers to customize their orders and request a waiter.
- Part of a team that developed an internal back office management system that processes and integrates data for the company's mobile ordering and POS application, supporting its restaurant business.
- Provided hotfix, debugging and maintenance services of various production websites based in Tokyo, Japan.
